

# Installation

**Thank you for buying Mirrl. Our hard wearing material has been designed and manufactured to the highest standards and we hope you will have many years of pleasure using it.**

**To ensure the validity of our 10 year warranty, please ensure that it is fitted with due care in accordance with the guidance below.**

**Mirrl as a material is best thought of and treated as a laminate when machining and finishing. \***

**With sharp edged tooling breakout will be minimised.**

**To joint Mirrl pieces together standard worktop procedures should be observed.**

**Jointing compound with instructions can be provided by us to produce a chemically welded seamless joint.**

**Mirrl is typically finished by us with 320 grit sandpaper and surface finish product, such as Eagle Solid Surface Cleaner®.**

**Any subsequent work by you should finish at the same grit and with equivalent product to maintain surface appearance consistency.**

**\*As such it is important to note that although Mirrl is a solid surface, any excessive sanding will cut through the layers and change the immediate appearance of the joint. It is advised to get a completely flush seam prior to chemical welding.**
